PROFILE

Final-year Applied Statistics student at Universidad Complutense de Madrid (UCM), graduating June 2027, with hands-on projects in statistical modelling, credit risk and data analysis using Python, R, SQL and SPSS. Experience evaluating LLM outputs through RLHF annotation and coordinating community activities in Madrid. Seeking a finance analyst internship, with a university practicum agreement (convenio de prácticas) through UCM.

EDUCATION

Bachelor's Degree in Applied Statistics · **Universidad Complutense de Madrid** *Sep 2023 – Jun 2027*

Grado en Estadística Aplicada

Relevant coursework: Statistical Modelling, Multivariate Analysis, Databases (SQL), Simulation, Market Research, Economic Statistics

EXPERIENCE

AI Bilingual Data Specialist – Freelance · **DataAnnotation** *2025 – present*

- Apply RLHF to improve LLM outputs in bilingual (Spanish/English) annotation tasks; QA review of analyst prompts, conversations, and instruction-following accuracy.
- Ensure model adherence to safety, truthfulness, and ethical guidelines across diverse task types.

Community Assistant · *Madrid · 2024 – present*

- Coordinate schedules and logistics across community events and activities involving 30+ members.
- Handle members' problems and scheduling conflicts one-to-one, agreeing a solution and following up.

SELECTED PROJECTS

Corporate Credit Risk Analysis: Intel vs. AMD *Python, R · 2026*

- Compared the financial health of Intel and AMD (FY2022–2025) using SEC 10-K data; showed Intel's 2025 recovery in Altman Z'' came from new financing, not operations, and that AMD's score is inflated by acquisition goodwill.

Credit Risk & Compliance Modeling: FICO HELOC Dataset *Python, SPSS · 2025*

- Built an explainable logistic regression credit scoring model on 9,682 HELOC applications (AUC 0.80, 73% test accuracy), interpretable through odds ratios in line with Basel III and EU AI Act transparency requirements.

Multivariate Analysis Projects (team of 2) *SAS · 2024–2025*

- Applied discriminant, factor and correspondence analysis to three datasets for classification and dimensionality reduction, including a discriminant model that classified 93.8% of cases correctly; communicated findings through data visualizations (factor plots, correspondence maps).

TECHNICAL SKILLS

- **Programming:** Python (pandas, NumPy), R, SQL, SAS
- **Statistics:** Logistic regression, PCA and factor analysis, clustering (k-means, hierarchical), discriminant and correspondence analysis, bootstrapping
- **Tools:** Excel, Power BI, SPSS, Git/GitHub, Quarto
